

UI SUSTAINABILITY RESOURCE COMPILATION PROJECT

The UI Sustainability Resource Library Project will help establish a baseline of information on sustainability, at UI, to be housed in the UISC, by sorting and organizing existing materials and soliciting new donations. The UISC Resource Library will provide students with ideas for projects and promote collaboration which can successfully advance sustainability at UI through student-led projects. The resource library will also organize non-print and informal materials to help document UI's sustainability history and activities.

DATA

Award Date:
Fall 2006
Award Amount:
\$1,175
Expected Completion:
May 2007
Location:
UISC Office

GOALS

Systematically organize sustainability materials available in the UISC.

Build an online record of UISC resources for students and other users.

HIGHLIGHTS

Letter of request, December 2006, resulted in donations of varied print and other sustainability materials to the growing UISC sustainability resource library.

Proposal amendment, March 2007, adjusted project goals and description to refocus around completion of a feasibility study to outline how a UISC resource library could be developed, organized and catalogued to be searchable online and compatible with standard library referencing systems such as the UI Library's LC cataloguing.
